

**Dina Kimble**  
President and CEO  
Royal Electric Company

*What projects are you currently working on?*

A few notable local projects we've recently completed or are finishing up include the Teaching and Learning Complex at UC Davis, a new innovative, 100,000-square-foot, four-story building...(that will include) an auditorium, lab, lecture halls and classrooms; Twelve Bridges High School in Lincoln, a new high school (expected to open this fall) built on a 56-acre site...; and Folsom Lake Intake improvements, which provides a vital water source for customers in El Dorado Hills.

*How did Royal Electric navigate the pandemic?*

Construction industry associations like Associated General Contractors of California and Sacramento Regional Builders' Exchange helped us navigate the barrage of information and regulations in the early days of the pandemic...As a company, we made a strategic decision to continue growing our team during the pandemic because we knew the work would be there to build beyond 2020. We invested in training our teams while projects were slow and in leveling up our processes and departments to be poised for the growth we predicted and are seeing in 2021.

## The New Clifford L. Allenby Building

Airco is proud to have been on the project team for the exciting new Clifford L. Allenby building, a transformative new State of California office building for our city's urban core. Thanks and congratulations to DGS and our design build team led by Rudolph and Sletten along with architectural firms ZGF and Lionakis.
